**Description of Property and Justification:** *(Please attach map and photo)*

CT-1310 is located near the southwest terminus of Point Patience Drive. CT-1310 is a one-story masonry vernacular building, measuring 21 feet by 18 feet. The front-gabled roof is clad with composition shingles. A brick chimney, massive for the scale of the building, is located on the exterior east gable wall. Historic aerial photographs show that the building has been considerably altered by the partial dismantling of the chimney, which was once several stories high and now extends but a few feet above the roof of CT-1310. Fenestration consists of wood and vinyl single-hung-sash windows with one-over-one lights. The building is accessed through an entrance of double metal doors, each with a single square light of safety glass. A small opening in the brick wall of the west elevation houses an air conditioning window unit. The building has an open floor plan.

A review of historic aerial photographs of the area indicates a construction date for CT-1310 between 1942 and 1944. In a 1947 map of the area, CT-1310 (Building 23) is listed as "Boiler House for Bldg. 22." Building 22 is listed as "Project F Building"; however, research did not reveal any information regarding the use of Building 22. CT-1310 is related to the operations of the former U.S. Naval Mine Warfare Test Station on Solomon's Island, Maryland. The integrity of association and setting of CT-1310 has been compromised with the substantial loss of associated structures. CT-1310 has also been substantially altered with the
